EXP NO: 1 DATE:	AZURE DEVOPS ENVIRONMENT SETUP
----------------------------------	---------------------------------------

AIM:-

To set up and access the Azure DevOps environment by creating an organization through the Azure portal.

INSTALLATION:-

1. Open your web browser and go to the Azure website: <https://azure.microsoft.com/en-us/get-started/azure-portal>. Sign in using your Microsoft account credentials.

If you don't have a Microsoft account, you can create one here: <https://signup.live.com/?lic=1>

2. Azure home page

3. Open DevOps environment in the Azure platform by typing *Azure DevOps Organizations* in the search bar.

4. Click on the ***My Azure DevOps Organization*** link and create an organization and you should be taken to the Azure DevOps Organization Home page.

RESULT:

Successfully accessed the Azure DevOps environment and created a new organization through the Azure portal.

EXP NO: 2 DATE:	AZURE DEVOPS PROJECT SETUP AND USER STORY MANAGEMENT
----------------------------------	---

AIM:-

To set up an Azure DevOps project for efficient collaboration and agile work management.

1. Create An Azure Account

2. Create the First Project in Your Organization

- a) After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.
- b) On the organization's **Home page**, click on the **New Project** button.
- c) Enter the project name, description, and visibility options:
Name: Choose a name for the project (e.g., **LMS**).
Description: Optionally, add a description to provide more context about the project.
Visibility: Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).
- d) Once you've filled out the details, click **Create** to set up your first project.

Create new project

Project name *

Evaluation of Academic Performance

The project 'Evaluation of Academic Performance' already exists.

Project settings

5. To manage user stories:

a. From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards**

page, where you can manage work items, backlogs, and sprints.

b. On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a + button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

The screenshot shows the Azure DevOps interface for a project named 'Evaluation of Academic Performance'. The left-hand navigation menu is visible, with 'Boards' selected. The 'Work items' view is active, displaying a list of work items. The table below represents the data shown in the screenshot.

Successfully created an Azure DevOps project with user story management and agile workflow

**EXP NO:
3 DATE:**

SETTING UP EPICS, FEATURES, AND USER STORIES FOR PROJECT PLANNING

AIM:-

To learn about how to create epics, user story, features, backlogs for your assigned project.

Create Epic, Features, User Stories, Task

The screenshot displays the Azure DevOps interface for the 'E-commerce Website Team'. The left sidebar shows the navigation menu with 'Backlogs' selected. The main area shows the 'Backlog' view for the team. The backlog is organized into a hierarchy:

- Epic 1:** order/feedback management
 - Feature:** order and placement confirmation
 - User Story 1:** as a user i want to give feedback so that i rate products
 - User Story 2:** as a user i want to review so that i rate products
 - User Story 3:** as a user i want to place order so that choose product
 - User Story 4:** as a user i want to confirm order so that rate product
- Epic 2:** user shopping experience
 - Feature:** user registration/login
 - User Story 1:** as a user i want to browse items so that choose items
 - User Story 2:** as a user i want to filter products so that find specific I...
 - User Story 3:** as a user,i want to add items to cart so that purchase
 - User Story 4:** as a user i want to review so that i rate for products

The right sidebar shows the 'Planning' section with a 'New Sprint' button and a 'New Work Item' button at the top.

1.Fill in Epics

Sprint 3

The screenshot displays the Azure DevOps interface for the 'E-Commerce Website Team'. The left sidebar shows the project structure with 'Sprints' selected. The main area is the 'Taskboard' for 'Iteration 1', showing a Kanban-style view with columns for 'New', 'Active', 'Resolved', and 'Closed'. The 'New' column contains four work items:

- Item 62: 'BG_01 Invalid credential' (New, assigned to Janane Jaiprath...)
- Item 44: 'as a user i want to browse items so that choose items' (New, Unassigned)
- Item 45: 'as a user i want to filter products so that find specific items' (New, Unassigned)
- Item 46: 'as a user i want to add items to cart so that purchase' (New, Unassigned)

The interface includes a search bar, a 'New Work Item' button, and a 'Column Options' menu. The bottom of the sidebar shows 'Project settings'.

RESULT:-

The Sprints are created for the Student Management System.

EXP NO:
5 DATE:

POKER ESTIMATION

AIM:-

Create Poker Estimation for the user stories -Student management System.

Poker Estimation:-

The screenshot displays the Azure DevOps Planning Poker interface. The left sidebar shows the 'E-Commerce Website' project with various views like Overview, Boards, Work items, and Backlogs. The main area is titled 'team game' and shows the current item: 'as a user i want to review so that i rate products'. The game is in progress with 1 participant (JS) and 0 votes. A 'Reveal' button is visible. Below the game area, a table lists the game scope items:

Work Item	State	Estimates
as a user i want to browse items so that choose items USER STORY 44	New	-
as a user i want to review so that i rate products USER STORY 51	New	-
as a user i want to place order so that choose product USER STORY 52	New	-
as a user i want to confirm order so that rate product	-	-

A notification at the bottom states: 'You are now estimating work item 51'. On the right, a detailed view of 'USER STORY 51' is shown, including its description and a search bar.

RESULT:-

The Estimation/Story Points is created for the project using Poker Estimation.

DESIGNING USE CASE DIAGRAMS AND ACTIVITY DIAGRAM FOR PROJECT ARCHITECTURE

AIM:-

To Design an activity Diagram and use case Diagram for the given Project.

7A. Activity Diagram:-

7B. USE CASE DIAGRAM:-

RESULT:-

Thus activity and use case diagram has been designed successfully for Student Management System

EXP NO: 8 DATE:	TESTING – TEST PLANS AND TEST CASES
----------------------------------	--

AIM:-

Test Plans and Test Case and write two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

**Test Planning and Test Case
Test Case Design Procedure****1. Understand Core Features of the Application**

- User Signup & Login
- Student Enrollment in Courses
- Assignment Submission & Evaluation
- Viewing Grades and Attendance
- Admin Role Management and Report Generation

2. Define User Interactions

- Each test case simulates a real user behavior (e.g., logging in, submitting an assignment, viewing results).

3. Design Happy Path Test Cases

- Focused on validating that all core functionalities work correctly under normal conditions.
- **Example:** Student registers and logs in, enrolls in a course, submits assignment, and views grades.

4. Design Error Path Test Cases

- Simulate invalid inputs, system issues, or failed actions to ensure proper error handling.
- **Example:** Login with wrong credentials, submission without attachment, unauthorized access to admin panel.

5. Break Down Steps and Expected Results

- Each test case includes a clear sequence of actions and expected results.
- Ensures both manual testers and automation tools can follow the process easily.

6. Use Clear Naming and IDs

- Test cases are uniquely identified (e.g., TC01 – Student Login Success, TC12 – Invalid Assignment Submission).
- Facilitates easy mapping to features and tracking in Azure DevOps.

7. Separate Test Suites

- Grouped by functionality such as:

- Login and Registration
- Course Enrollment

- Assignment Submission
- Report Generation
- Admin Functions
- Improves organization and enables focused execution in Azure DevOps.

8. Prioritize and Review

- High-priority assigned to critical workflows like login, course access, and grading.
- Reviewed for completeness, accuracy, and alignment with user stories and feature definitions.

1. Test suite

The screenshot displays the Azure DevOps Test Plans interface for a project named 'E-Commerce Website'. The left sidebar shows the navigation menu with options like Overview, Boards, Repos, Pipelines, Test Plans, Progress report, Parameters, Configurations, Runs, Exploratory sessions, and Artifacts. The main area shows the 'Test Suites' section for 'TC01' (ID: 55), which is marked as 'Past' and shows a 100% run and 50% passed status. Below this, a table lists the test points for the suite.

Title	Outcome	Order	Test Case Id
TC01	Passed	1	56
TC 02	Passed	2	57
TC 03	Passed	3	58
TC 04	Passed	4	59

2. Test case

Give two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

Student Management System– Test Plans

USER STORIES:-

- As a student, I want to sign up and log in securely so I can access academic services. (ID: 101)
- As a student, I need to enroll in courses to participate in classes. (ID: 102)
- As a student, I should be able to submit assignments online for evaluation. (ID: 103)
- As a student, I want to view grades and attendance in one place. (ID: 104)
- As an admin, I want to manage users and generate performance reports. (ID: 105)

Test Suites:-

Test suit : TS01 – User Login & Registration (ID: 201)

1. TC01 – Successful Student Sign-Up

- **Action:**
 - Go to the Sign-Up page
 - Enter valid name, email, and password
 - Click "Sign Up"
- **Expected Result:**
 - Student account is created and redirected to dashboard
- **Type:** Happy Path

2. TC02 – Login with Valid Credentials

- **Action:**
 - Go to Login page
 - Enter valid student email & password
 - Click "Login"
- **Expected Result:**
 - Logged in and taken to student dashboard
- **Type:** Happy Path

3. TC03 – Sign-Up with Existing Email

- **Action:**
 - Go to Sign-Up
 - Enter already registered email
 - Click "Sign Up"
- **Expected Result:**
 - Error message: "Email already registered"
- **Type:** Error Path

4. **TC04 – Login with Incorrect Password**

- **Action:**
 - Enter wrong password
 - Click "Login"
- **Expected Result:**
 - Error: "Invalid username or password"
- **Type:** Error Path

Test Suite: TS02 – Course Enrollment (ID: 202)

1. **TC05 – Enroll in Available Course**

- **Action:**
 - Login → Navigate to Course List
 - Select a course → Click "Enroll"
- **Expected Result:**
 - Enrollment confirmation shown
- **Type:** Happy Path

2. **TC06 – Try Enrolling in a Full Course**

- **Action:**
 - Select a course with no seats available
 - Click "Enroll"
- **Expected Result:**
 - Error: "Enrollment failed – course full"
- **Type:** Error Path

Test Suite: TS03 – Assignment Submission (ID: 203)

1. **TC07 – Submit Assignment Successfully**

- **Action:**
 - Login → Go to Assignments
 - Upload file and click "Submit"
- **Expected Result:**
 - Submission confirmation message shown
- **Type:** Happy Path

2. **TC08 – Submit Without Uploading File**

- **Action:**
 - Open assignment submission
 - Click "Submit" without file
- **Expected Result:**
 - Error: "Please upload a file before submitting"
- **Type:** Error Path

Test Suite: TS04 – View Grades & Attendance (ID: 204)

1. TC09 – View Grades Dashboard

- **Action:**
 - Login → Go to "My Grades"
- **Expected Result:**
 - All grades are displayed by subject
- **Type:** Happy Path

2. TC10 – Fail to Fetch Grades (Offline Scenario)

- **Action:**
 - Disconnect network → Go to "My Grades"
- **Expected Result:**
 - Error: "Unable to fetch data – check connection"
- **Type:** Error Path

Test Suite: TS05 – Admin Management (ID: 205)

1. TC11 – Assign Role to New User

- **Action:**
 - Login as Admin → Navigate to User Management
 - Select user and assign role
- **Expected Result:**
 - Confirmation: "Role assigned successfully"
- **Type:** Happy Path

2. TC12 – Generate Report with No Data

- **Action:**
 - Navigate to Reports → Choose empty semester
 - Click "Generate"
- **Expected Result:**
 - Message: "No data available to generate report"
- **Type:** Error Path

ProcessesFields

Name	Description	Team projects
Basic (default)	This template is flexible for any process and great for teams getting started with Azure DevOps.	1
Agile	This template is flexible and will work great for most teams using Agile planning methods, including those practicing Scrum.	2
Scrum	This template is for teams who follow the Scrum framework.	0
CMMI	This template is for more formal projects requiring a framework for process improvement and an auditable record of decisions.	0

Result:

The test plans and test cases for the user stories is created in Azure DevOps with Happy Path and Error Path

EXP NO: 9 DATE:	CI/CD PIPELINES IN AZURE
----------------------------------	---------------------------------

AIM:

To implement a Continuous Integration and Continuous Deployment (CI/CD) pipeline in Azure DevOps for automating the build, testing, and deployment process of the Student Management System, ensuring faster delivery and improved software quality.

PROCEDURE:**Steps to Create and implement pipelines in Azure:**

1. Sign in to Azure DevOps and Navigate to Your Project
Log in to dev.azure.com, select your organization, and open the project where your Student Management System code resides.
2. Connect a Code Repository (Azure Repos or GitHub)
Ensure your application code is stored in a Git-based repository such as Azure Repos or GitHub. This will be the source for triggering builds and deployments in your pipeline.
3. Create a New Pipeline
Go to the Pipelines section on the left panel and click “Create Pipeline”.
Choose your source (e.g., Azure Repos Git or GitHub), and then select the repository containing your project code.
4. Choose the Pipeline Configuration
You can select either the YAML-based pipeline (recommended for version control and automation) or the Classic Editor for a GUI-based setup.
If using YAML, Azure DevOps will suggest a template or allow you to define your own.
5. Define Build Stage (CI - Continuous Integration) from YAML file
6. Install dependencies (e.g., npm install, dotnet restore)
7. Build the application (dotnet build, npm run build)
8. Run unit tests (dotnet test, npm test)
9. Publish build artifacts to be used in the release stage

10. Save and Run the Pipeline for the First Time

Save the YAML or build definition and click “Run”.

Azure will fetch the latest code and execute the defined build and test stages.

11. Configure Continuous Deployment (CD)

Navigate to the Releases tab under Pipelines and click “New Release Pipeline”.

Add an Artifact (from the build stage) and create a new Stage (e.g., Development, Production).

12. Configure the CD stage with deployment tasks such as deploying to Azure App Service, running database migrations or scripts, and restarting services using the Azure App Service Deploy task linked to your subscription and app details.

13. Set Triggers and Approvals

Enable continuous deployment trigger so the release pipeline runs automatically after a successful build.

For production environments, configure pre-deployment approvals to ensure manual verification before release.

14. Monitor Pipelines and Manage Logs

View all pipeline runs under the Runs section.

Check logs for build/test/deploy stages to debug any errors.

You can also integrate email alerts or Microsoft Teams notifications for build failures.

15. Review and Maintain Pipelines

Regularly update your pipeline tasks or YAML configurations as your application grows.

Ensure pipeline runs are clean and artifacts are stored securely.

Integrate quality gates and code coverage policies to maintain code quality

GITHUB: PROJECT STRUCTURE & NAMING CONVENTIONS

Aim:

To provide a clear and organized view of the project's folder structure and file naming conventions, helping contributors and users easily understand, navigate, and extend the Student Management System project.

GitHub Project Structure

The screenshot displays the Azure DevOps interface for a GitHub repository named 'E-Commerce Website'. The left sidebar shows the repository's structure with options like Overview, Boards, Repos, Files, Commits, Pushes, Branches, Tags, Pull requests, Advanced Security, Pipelines, Test Plans, Artifacts, and Project settings. The main area shows the 'Files' view for the 'main' branch, listing a file named 'web page' with a last change date of 'Apr 24' and a commit hash of 'd342e8ed'. The commit message is 'Add academic performance evaluation w...'. The interface also includes a search bar, a 'Set up build' button, and a 'Clone' button.

Name ↑	Last change	Commits
web page	Apr 24	d342e8ed Add academic performance evaluation w...

Result:

The GitHub repository clearly displays the organized project structure and consistent naming conventions, making it easy for users and contributors to understand and navigate the codebase.
